

Limits to Infinity (Horizontal Asymptotes)

p. 128 - 137 (2.5)

BOBO BOTU BETC

13

Analytically, finding limits to infinity of *rational polynomial functions*:

- If degree of numerator = degree of denominator, then limit is the ratio of coefficients of the highest degree.
- If degree of numerator < degree of denominator, then limit = 0.
- If degree of numerator > degree of denominator, then limit DNE.

Reminder: After finding any holes (common factors) of a rational function, a vertical asymptote occurs where the denominator = 0.

Special Note: Limits to negative infinity of square root functions are treated differently

Find the a) limits and b) horizontal asymptotes for 1 - 3.

**1. $\lim_{n \rightarrow \infty} \frac{4n^2}{n^2 + 10,000n}$ 2. $\lim_{x \rightarrow -\infty} \frac{\sqrt{2x + 5}}{\sqrt{3x + 1}}$ 3. $\lim_{x \rightarrow \infty} \frac{2x^5 - 7}{-5x^2 + 9}$

**4. If the graph of $y = \frac{ax + b}{x + c}$ has a horizontal asymptote $y = 2$ and a vertical asymptote $x = -3$, then $a + c = \underline{\hspace{2cm}}$?

**5. For $x \geq 0$, the horizontal line $y = 2$ is an asymptote for the graph of the function f . Which of the statements below must be true?

(A) $f(0) = 2$ (B) $f(x) \neq 2$ for all $x \geq 0$ (C) $f(2)$ is undefined

(D) $\lim_{x \rightarrow 2} (f(x) = \infty)$ (E) $\lim_{x \rightarrow \infty} (f(x) = 2)$
