

Conditions that Destroy Differentiability

p. 155 - 165 (2.8)

18

1. Corner
 2. Cusps
 3. Vertical tangent lines
 4. Discontinuities
-

1. Answer both parts below for $f(x) := \begin{cases} x^2 + 1 & x < 0 \\ -(x^2) + 4 & x \geq 0 \end{cases}$

- a) Show that $f(x)$ is or is not continuous at $x = 0$.
- b) Prove that $f(x)$ is or is not differentiable at $x = 0$.

**2. The graph shown below has a vertical tangent at $(2, 0)$ and horizontal tangents at $(1, -1)$ and $(3, 1)$. For what values of x , $-2 < x < 4$, is f not differentiable?
