

## Local Extrema on an Interval

p. 278 - 286 (4.3)

# 41

Let  $c$  be an interior point of the domain of the function  $f$ . Then  $f(c)$  is a:

**local (relative) maximum value** if  $f(x) \leq f(c)$  for all  $x$  in some open interval containing  $c$ .

**local (relative) minimum value** if  $f(x) \geq f(c)$  for all  $x$  in some open interval containing  $c$ .

---

Using the graphs of the following functions, determine the

a) relative (local) maximum value(s)

b) relative (local) minimum value(s)

1.  $f(x) = \frac{9(x^2 - 3)}{x^3}$

2.  $y = |x|$

3.  $y = x + \left(\frac{3}{2}\right)\sin x$  for the interval  $(-10, 10)$
